EDUCATION

University of California, Irvine

September 2024 - December 2025

M.S. in Computer Science | **GPA: 3.87**

Relevant Coursework: Databases, IoT, Machine Learning, Data Structures, Operating Systems

California State Polytechnic University, Pomona

August 2019 - May 2023

B.S. in Computer Science | **GPA: 3.88**

Honors: Summa Cum Laude, Research Distinction

TECHNICAL SKILLS

Programming Languages: Java, Python, JavaScript, HTML, CSS, MySQL

Frameworks & Libraries: React.js, Tailwind CSS, Repast Suite

Cloud, Data & Dev Tools: Supabase, PostgreSQL, AWS Amplify, GitHub, GitLab

Design & Platforms: Figma, Photoshop, Illustrator, Windows 10/11, Linux (Ubuntu)

EXPERIENCE

The Coder School

October 2023 – June 2025

Code Coach | Irvine, CA

- Developed and implemented programming curriculum in Python, Java, and Scratch for students with varied experience levels.
- Provided individualized coaching and adapted instruction to students' skill levels, goals, and interests.
- Taught one-on-one and small-group coding lessons to 15+ students ranging from elementary through high school.

Technology Consultant Inc.

July 2020 - October 2020

Software Engineering Intern | McLean, VA

- Developed a full-stack HR management web application integrating responsive web interfaces, business logic, and a Supabase-hosted PostgreSQL database for dynamic employee and HR workflows.
- Designed relational data models, ER diagrams, database schemas, and CRUD operations; translated business requirements into tables, relationships, constraints, and application workflows using PostgreSQL, Supabase, SQL, and Lucidchart/Draw.io.
- Created wireframes, page layouts, and user workflows and developed site functionality using WordPress and GoDaddy, turning initial requirements and static designs into a functional web application.

PROJECTS

FinePrint Chrome Extension

January 2025 - May 2025

- Developed a Chrome extension that scans Terms and Conditions documents in real time and highlights legally risky clauses using OpenAI LLMs.
- Designed custom prompts and structured output schemas for OpenAI API responses, reducing irrelevant model output and improving consistency of extracted legal insights.
- Built a dynamic front-end UI that visualizes legal risk, summarizes clauses, and communicates with a processing API.

Boston Dynamics Spot Research Project

March 2023 - May 2023

- Collaborated with a five-member team to develop a Python-based autonomous package delivery system for the Boston Dynamics Spot robot using the Spot SDK/API, enabling autonomous navigation, package retrieval, and delivery.
- Implemented GraphNav-based waypoint navigation in Python, guiding Spot through a recorded map into designated rooms while using onboard cameras to detect AprilTag fiducial markers as delivery-location references.
- Integrated the navigation workflow with the broader package-handling system, enabling Spot to localize, reach designated delivery points, and transition to robotic-arm package pickup and delivery.

Research on Leveraging Agent-Based Models for Analyzing Disease Spread

June 2022 - January 2023

- Modeled disease transmission with agent-based methods and compartmental epidemiology using Repast Symphony and synthetic Watts-Strogatz networks.
- Ran simulations across multiple processors on a 1,000,000-node network and validated scenarios using CDC COVID-19 data.
- Authored one of 10 papers accepted from 36 submissions to the 2023 Computer Science Conference for CSU Undergraduates.

IdeART Website and Mobile App

October 2022 - December 2022

- Prototyped user flows in Figma and implemented web and mobile interfaces using React and Flutter.
- Used AWS Amplify and GraphQL data models to support post creation and modification workflows.
- Implemented authentication and permission-based access for account sign-in and content creation.
